

Internship Evaluation Presentation

Software Engineering Internship

Namita Kumari | CS-2341549 · IILM University, Greater Noida

TRUFINIXX · 15 JUNE 2026 – 15 JULY 2026

Organization Overview

Company

Trufinixx

Focus

Technology & Software Solutions

Vision

Innovate · Inspire · Impact

Expertise

Web Development, Cloud Solutions & Enterprise Software

Delivering cutting-edge digital solutions that transform businesses and empower teams

Internship Overview

Primary Objectives:

- Full-stack web application development
- Hands-on experience with modern web technologies
- Industry-standard development practices
- Real-world project contribution

Position

Software Engineering Intern

Duration

1 Month · 15 June – 15 July 2026

Areas of Exposure

Frontend · Backend · System Design
· SDLC

Problem Statement & Project Objectives

Challenge: Need for an integrated web platform to streamline workflow management and improve team collaboration.

Project Scope

1

Requirement Analysis

Documentation of client needs and specifications

2

UI/UX Design

Prototyping and interface design

3

Development & Integration

Frontend build + backend API integration

4

Testing & Deployment

Debugging and deployment readiness

Technologies & Tools Used

Frontend

HTML5, CSS3, JavaScript (ES6+)

Dev Environment

Visual Studio Code

Version Control

Git & GitHub

Backend Integration

REST APIs

Additional Tools

Browser DevTools & Postman

Modern, industry-standard technologies used in professional web development

System Architecture

Three-Tier Architecture Model

Communication Flow: Client → REST API → Server → Database → Response

Scalable and maintainable architecture following industry best practices

Presentation Layer

User interface built with HTML5, CSS3 & JavaScript

Application Layer

Business logic and request processing

Data Access Layer

Database interaction and API communication

Development Methodology

Agile Methodology · Daily stand-ups · Continuous feedback · Collaborative problem-solving

Work Performed & Key Learnings

Requirement Gathering

Client needs, specifications, and documentation

Web Development

Responsive and interactive web applications

Version Control

Collaborative workflows using Git and GitHub

Teamwork & Problem-Solving

Debugging, communication, and industry exposure

Outcomes & Achievements

Functional Module

Successfully developed and deployed a working project module

SDLC Mastery

Comprehensive knowledge of all development lifecycle phases

Technical Growth

Proficiency in frontend technologies and REST API integration

Industry Exposure

Real-world experience with professional development practices

Professional Growth

Enhanced communication, teamwork, and technical competencies

Conclusion & Thank You

This internship provided invaluable practical experience in software engineering, bridging the gap between academic learning and industry practices.

Special thanks to **Trufinixx** for the opportunity, and to all mentors and team members for their guidance and support.

Thank You

Questions & Discussion Welcome
